

ABSTRACT OF THE INVENTION

A method for a server to provide professional training information and compliance knowledge information to networked computers. The method obtains login data from a user at a computer. The user is provided compliance knowledge based on the login data. The user is also provided personalized professional training associated with the compliance knowledge and based on the login data. Compliance use data, training performance data and training progress data associated with login data is generated. The generated data is used for the generation of documents. The system provides compliance management to a user having administrative privileges. The system enables communication between users of the system.
